

YOUR TURN

Bar plots practice exercise

Recreate the bar within this plot:

SOURCE: The Economist

To draw this bar you'll need to create your own custom dataset:

```
candidates <- c("Biden", "Trump")
results <- c(306, 232)
election <- c("2020 Election", "2020 Election")
df <- data.frame(candidates, results, election)
```

Don't try to recreate the labels: labels like these are not part of ggplot's job.

You can, however, try to include the middle segment. For this, you should read the documentation on `geom_segment`.
